1. A carpet cutting tool for cutting circular segments out of a carpet, comprising:

a hollow cylinder having an open end and a closed end, the open end having a circumference and a sharp, uniform, smooth cutting edge defined about the circumference of the open end of the cylinder; and

means for attaching the closed end to a power drill;

whereby, the cutting edge is adapted for cutting circular segments of damaged carpeting from the carpet when rotated by the power drill.

2. The carpet cutting tool according to claim 1, wherein said means for attaching comprises a shaft irremovably fixed to the closed end of the cylinder, the shaft being adapted for being gripped by a chuck of the power drill.

3. The carpet cutting tool according to claim 1, wherein:

the closed end of the cylinder has an aperture defined therein; and

said means for attaching comprises an arbor having an arbor shaft removably inserted through the aperture in the closed end, and a fastener attached to the arbor shaft for retaining the cylinder on the arbor shaft.

- 4. A method of repairing a damaged section of a carpet using the carpet cutting tool of claim 1, comprising the steps of:
- (a) cutting and removing a damaged section from the carpet using the carpet cutting tool in order to define an opening in the carpet;
- (b) cutting a replacement piece of carpet from an undamaged roll of carpet using the carpet cutting tool;
- (c) cutting a piece of mesh material and a piece of semirigid material, both the piece of the mesh material and the piece of the semi-rigid material having a diameter about three inches larger than the opening in the carpet;
- (d) bending the semi-rigid material and inserting the semi-rigid material through the opening in the carpet in order to lie centered under the opening;
- (e) placing the mesh material through the opening and over the semi-rigid material, thus forming a backing for the replacement piece of carpet;
- (f) applying an adhesive between the backing and the carpet, so that the backing adheres to the underside of the carpet surrounding the opening;

- 22 (g) applying adhesive to the bottom of the replacement
 23 piece of carpet and inserting the replacement piece into the
 24 opening;
 - (h) placing a flat weight over the area repaired; and
 - (i) allowing the adhesive to dry.
 - 5. The method of claim 4, wherein the semi-rigid material is cardboard.
 - 6. The method of claim 4, wherein the mesh material is nylon.
 - 7. The method of claim 4, wherein the mesh material is metal wire.
 - 8. The method of claim 4, wherein the mesh material is fiberglass.
 - 9. The method of claim 4, wherein the mesh material is plastic.
